## WORK EXPERIENCE

### • Software Engineer Intern at Broadridge Trading and Connectivity Solutions

July 2022 - Present

As a pivotal member of a collaborative team at Broadridge, I co-engineered an application, starting from the ground up. This included designing a scalable database and developing the frontend in React. On the backend, I utilized Kotlin and Spring Boot to ensure a robust and efficient system. This collaborative effort allowed for the smooth integration of various technology components, creating an environment where knowledge and expertise were shared, ultimately improving my abilities in teamwork, communication, and project coordination.

### • Software Engineer Intern at National Instruments

December 2022 - July 2022

While working on the System Link team, I gained valuable experience working on a large-scale project within a major corporation. During my time there, I deepened my understanding of Git, improved my ability to write effective tests, and developed my skills in debugging. I also expanded my knowledge of Docker and gained proficiency in several programming languages and frameworks, including Elixir, Angular, and C# .NET.

### • Java Internship at Capgemini Engineering

August 2022 - October 2022

Collaborating with a team of three interns, I contributed to the development of the backend for a social media app using Spring Boot. Through this experience, I gained valuable insights into working collaboratively, and developed my skills in Java Spring, database management, writing effective unit tests, and utilizing Rest APIs.

## EDUCATION

### • "Babes-Bolyai" University Cluj-Napoca, România

Faculty of Mathematics and Computer Science  
Pursuing Bachelor in Computer Science

October 2021-present

Expected graduation: July 2024

### • "Ștefan Cel Mare" National College, Neamț, România

High School Education specializing in Mathematics and Informatics

September 2017

- July 2021

## AWARDS

- 11th place on UBB Mate-Info's 2021 programming admission
- 30th place on UBB Mate-Info's 2021 programming contest
- 3th place in County Mathematics Olympics 2018 and 2019 <https://github.com/TudorMurariu/CV-stuff>
- Participation in the 2021 Hermes Hackathon with a react native project : [\[github link\]](#)

## SKILLS

- **TEHNICAL** C/C++ and Java (extensive coding contest experience and strong bases from projects development), Python , JavaScript, C#, Elixir and Assembly  
+ Contest experience with algorithms and data structures
- **SOFT SKILLS** Team spirit, problem solving, efficient communication, organizing skills, attention to details, constantly striving for improvement
- **LINGUISTIC** Romanian (native)  
English (fluent)

## PERSONAL PROJECTS

- **Tourism Agency App** in C++ for semester project for OOP course. My main purpose at the time was practicing the OOP concepts. I have acquired strong knowledge about memory management:Rule of three(C++),Rule of five(C++),RAII,memory leaks,dangling pointers,smart pointers.I implement a small part from class 'vector' from STL C++ using concepts like iterators,template etc.Beside of OOP concepts and design patterns(Observer,Model-ViewController) , I have learned about signals,slots for graphical user interface using QT. [\[github link\]](#)
- **LinkedIn Test Generator** Developed using Angular and TypeScript, this project significantly improved my Angular expertise. This project demonstrates an efficient user interface for generating LinkedIn tests. [\[github link\]](#)
- **Social Network.** As part of a full-semester faculty project, I had the opportunity to deepen my knowledge of Java while expanding my skillset. Throughout the project, I gained experience in domain-driven design, lambdas, JavaFX UI development, database connectivity, file handling in Java, and the observer pattern. The experience was an excellent opportunity to build on my existing Java expertise while exploring new areas of the language. [\[github link\]](#)
- **FlappyBird in Unity Engine (C#)** [\[github link\]](#)

## ACTIVITIES AND HOBBIES

- I used the 'PRAMP' platform to improve my skills for the next technical interviews and also to help other people and give them the best tips in solving problems.
- I enjoy building games that my friends can play, such as : [Xand0](#), [HangMan](#), [PolishCow](#), [Dice-Game](#), [Slot-Machine](#)
